Office Action Summary

Art Unit: 2862

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-6, 8, 11, 13, 14 and 16 rejected under 35 U.S.C. 102(a) as being clearly anticipated by Japan.

Note rotor #30, flexible status #20 and non-rotating actuator means #10, #11.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7, 9, 10, 12, 15 and 17 rejected under 35 U.S.C. 103(a) as being unpatentable over Japan in view of Tojo, Humphreys or Richter.

Japan teaches the harmonic motor structure using piez-electric drive elements. Selection from among known materials has long been held to be within the skill expected of the routineer. The specific transducer materials claimed (magneto-strictive) (electro-magnetic) are well known as taught e.g. by Tojo, Humphreys and Richter. Thus to substitute an electro-magnetic or magneto-strictive transducer element for the piezo electric elements of Japan would have been obvious to one of ordinary skill in the art.

Due to the newly cited art the above rejections are not made final.
